

A black pug dog is lying on a light-colored wooden stool. The dog's head is resting on the edge of the stool, and it is looking directly at the camera with a sad, weary expression. Its front paws are visible, resting on the stool. The background is a blurred indoor setting with a wicker basket and some furniture.

**How many times have you thought
“Oh, I can't be bothered to do this”?**

“I'll do that later”...

...and then forgot?

Do you want to change it?

NoMoreLazy

...is a programme that acts like a reminder for unmotivated people to do things that they can't be bothered doing / are too lazy to do, on the basis of a given interval (number of days), and it is completely customisable.

Photo © Elizabeth Lies / Unsplash

Execution

The Python programme is based on a dictionary, pairing the tasks with the ideal frequency for these tasks to be performed.

Some examples:

- **Call your mother**
- **Change the bedsheets**
- **Water the plants**
- **And many more...**

Code

The code includes a while loop and a function for time (date and weekdays / weekends).
